

Patient Identification Card

This person hears with a cochlear implant system. A metal device is implanted under the skin behind the ear, and external equipment is worn behind the ear or on the body (e.g. in a pocket). Without the equipment, this person cannot hear.

The system may activate airport security metal detectors.

Read the Important Information Booklet before starting any major medical treatment, particularly treatments such as MRI, involving induced currents. The booklet was supplied with the system. It is also available from Cochlear or at www.cochlear.com/warnings.
